

Meditation App Localization: Japan vs. Korea

Wikimedia Pageviews API · 2024-09 – 2026-08 · monthly human (non-bot) views, all platforms

Both markets show declining Wikipedia interest, but Korea shows stronger relative demand per capita—recommend validating Korea first with targeted search testing.

Edition · article	Views/mo	Per 1M	Rel. YoY	Raw YoY	Wiki YoY	Verdict	Trust
ja · 瞑想	3,031	3.4	-35.3%	-36.2%	-3.7%	declining	high 100
ko · 瞑想	593	10.8	-29.3%	-46.1%	-24.9%	declining	high 100

Interest over time (median month = 100)

2024-09 – 2026-08 · human views; each line is rebased to its own median month · ○ = spike month

Findings

- Korean Wikipedia shows meditation at 10.8 views per million edition views, 3x higher than Japan's 3.4 per million
- Japan has larger absolute audience (3k monthly vs 593) but Japan's interest declining faster (-35% YoY share vs Korea's -29%)
- Both markets show high-confidence data with no bot inflation—Wikipedia views measure curiosity, not app adoption intent

Assumptions & limits

- Pageviews measure curiosity, not willingness to pay; validate promising directions with a landing page or an ads test.
- Human traffic only; undetected bots may remain. Spike months are marked; median-based growth ignores them.
- Rel. YoY = change of the topic's share of all views in that edition; it assumes the edition-wide change (Wiki YoY) affects all topics equally.
- Per 1M = views per million views of the edition: fair across editions, but a small edition can look 'hotter' while being tiny in absolute terms.
- One article per topic; a broad topic (such as a course) deserves a basket of related articles.
