

German Courses Market Test: Turkey vs Italy vs Netherlands

Wikimedia Pageviews API · 2024-09 – 2026-08 · monthly human (non-bot) views, all platforms

Turkey shows stable interest in German language on Wikipedia (flat, 2942 views/month), while Italy and Netherlands both show declining interest (–15% and –17% YoY share).

Edition · article	Views/mo	Per 1M	Rel. YoY	Raw YoY	Wiki YoY	Verdict	Trust
tr · Almanca	2,942	27	-0.3%	-23.1%	-18.7%	flat	high 90
it · Lingua tedesca	6,849	17.9	-14.5%	-25.8%	-13.4%	declining	high 100
nl · Duits	1,669	16.4	-17.5%	-21.1%	-8.1%	declining	high 90

Interest over time (median month = 100)

2024-09 – 2026-08 · human views; each line is rebased to its own median month · ○ = spike month

Findings

- Turkey maintains stable engagement with no clear change in relative interest, making it the least risky market test
- Italy has the largest audience (6849 views/month) but shows declining interest (–15% YoY relative growth)
- Netherlands has the smallest audience (1669 views/month) and steepest relative decline (–17% YoY), suggesting lowest demand for German courses

Assumptions & limits

- Pageviews measure curiosity, not willingness to pay; validate promising directions with a landing page or an ads test.
- Human traffic only; undetected bots may remain. Spike months are marked; median-based growth ignores them.
- Rel. YoY = change of the topic's share of all views in that edition; it assumes the edition-wide change (Wiki YoY) affects all topics equally.
- Per 1M = views per million views of the edition: fair across editions, but a small edition can look ‘hotter’ while being tiny in absolute terms.
- One article per topic; a broad topic (such as a course) deserves a basket of related articles.
